Overview

Professional Banknote Verification

This banknote authenticity verification device is designed for retail, banking, and business environments where cash handling is frequent. It utilizes a multi-faceted approach to security, combining UV, magnetic, and watermark detection to ensure accurate identification of counterfeit currency. The compact, user-friendly design includes advanced features like a 10x magnifier and shielded UV irradiation to protect the operator's eyes during use.

Detection Capabilities

Illumination Features

- Shielded UV irradiation
- White light LED perspective detection
- Near irradiation for UV detection

Detection Methods	UV Light, Magnetic (MG), Magnetic Thread (MT), Watermark, White Light
Magnification Power	10 x

Compatibility

Currency Compatibility	Suitable for all kinds of currencies
