

Battery Charger Housing

This plastic housing is designed for a battery charger. It protects the charger's internal components while providing openings for connectors and ventilation.

Product Overview

Professional Battery Charger Housing

This durable plastic housing is engineered to serve as the outer casing for battery charger units. It features a precision-molded cavity designed for secure battery retention and includes integrated ventilation slots to ensure optimal thermal management for internal electronics. Built for reliability, this component provides essential protection for internal circuitry while offering a user-friendly interface for battery insertion and removal.

Physical Characteristics

Material	Industrial-grade plastic
Design Features	Ventilation slots, Battery cavity, Connector ports, Protective casing

Application

Primary Application	Battery charger enclosure
