

Bead Wrapping Machine

The bead wrapping machine is designed for wrapping beads with precision and efficiency. Its robust mechanical design includes a rotating wheel mechanism and guiding arms for accurate bead placement.

Product Overview

Precision Bead Wrapping Solution

This Bead Wrapping Machine is engineered for the precise application of triangle strips and outer wrapping cloth onto tyre steel wire circles. Designed for high-volume rubber processing environments, it features a robust mechanical structure with a rotating wheel mechanism and guiding arms. Its integrated control system and foot pedal operation ensure consistent, accurate placement for demanding production lines.

Technical Features

Core Functions

- Tyre steel wire circle covering
- Triangle strip application
- Outer wrapping cloth application

Control Interface

Electrical Control Box, Indicator Lights, Foot Pedal Operation

Construction

Design Highlights

Robust Mechanical Design • Rotating Wheel Mechanism • High-Volume Stability
