

# Bed Type Vertical Milling Machine with Manual Handwheel

This bed type vertical milling machine is designed for precision machining operations. It features a robust construction with a stable bed for supporting heavy workpieces.

## Overview

### Precision Bed Type Milling

This bed type vertical milling machine is engineered for high-precision machining tasks, offering a robust construction designed to support heavy workpieces with exceptional stability. Featuring a high-speed vertical spindle head, it ensures efficient material removal for a variety of demanding industrial applications. The integration of a manual handwheel allows operators to make fine, precise adjustments during complex milling, drilling, and boring operations.

## Machine Capabilities

Suitable Applications

Milling, Drilling, Boring

## Key Features

### Design Highlights

- Robust bed-type construction
- High-speed vertical spindle head
- Manual handwheel for precision control
- High workpiece support capacity

### Operational Precision

**1 Manual**

Adjustment Method
