

Beijing-Kowloon Railway Construction Project

The Beijing-Kowloon railway construction project highlights infrastructure development. This project was awarded the China Luban Prize for its high quality.

Project Overview

Beijing-Kowloon Railway Fuyang to Jiujiang Segment

The Fuyang to Jiujiang segment of the Beijing-Kowloon Railway represents a significant milestone in regional infrastructure development. This construction project has been formally recognized for its excellence, having been awarded the prestigious China Luban Prize, which serves as a benchmark for national high-quality infrastructure projects. The segment showcases high-standard engineering integration, featuring standard concrete sleeper track beds and integrated signaling systems designed for reliable long-term operations.

Technical Specifications

Track Components

- Concrete sleeper support system
- Engineered ballast foundation
- Standardized railway signaling infrastructure
