

Belt Driven Air Compressor for Industrial Applications

This belt-driven air compressor is designed for industrial and commercial applications. It delivers consistent airflow and pressure for various pneumatic tools and equipment.

Product Overview

Industrial Belt-Driven Air Compressor

This high-performance belt-driven air compressor is engineered for demanding industrial and commercial environments. It features a robust design with a high-efficiency motor and a durable pump to ensure consistent airflow and reliability. Built for longevity and ease of use, this unit includes essential safety features and is mobile for convenient positioning across various workspaces.

Technical Specifications

Model Number	IBL3090D
Cylinder Material	High-grade Copper

Key Features

Operational Advantages

- Stable pump and motor performance for extended longevity
- High-grade copper cylinder construction
- Simple maintenance requirements (regular drainage only)
- 100% factory tested at full pressure

Safety & Compliance	Overload Protection, Pressure Relief Valve, Full Pressure Tested
---------------------	--

Design & Utility

Mobility	Yes
