

# Benchtop Metal Bending Brake

This bench type hand brake is designed for precise and efficient metal bending. Its robust construction ensures durability and stability during operation.

## Product Overview

### Benchtop Metal Bending Brake

This bench-type hand brake is engineered for precise and efficient metal bending in workshop environments. Its robust construction ensures exceptional stability and durability, making it an ideal solution for small-scale production and prototyping. Featuring a manual operation mechanism, it allows for controlled bending angles and consistent, repeatable results across various ductile metals.

## Capabilities

### Key Features

- Hand-operated mechanism
- Adjustable back gauge for repeatability
- Sturdy base for stable forming
- Compact benchtop design

### Compatible Materials

Mild Steel, Aluminum, Ductile Metals

## Application

### Recommended Use

Prototyping • Small-scale Production • Workshop Use
