

Beryllium Bronze Non-Sparking Bung Wrench

This non-sparking bung wrench is constructed from beryllium bronze alloy. It is designed for opening and closing bungs on drums and barrels in hazardous environments.

Product Overview

Professional Non-Sparking Solution

This non-sparking bung wrench is engineered from high-quality beryllium bronze alloy, specifically designed for safe operation in hazardous environments where flammable materials are present. It serves as an essential tool for oil and gas, chemical processing, and pharmaceutical industries, providing both non-sparking and non-magnetic properties. The dual-purpose design features a square socket on one end and a specialized head on the other, ensuring versatility when opening and closing various drum and barrel bungs.

Material & Safety

Material	Beryllium Bronze Alloy
Safety Properties	Non-Sparking, Non-Magnetic, Corrosion Resistant

Compliance & Standards

Certifications
ISO 9001:2008
