

Bevel Gear for Agricultural Machinery

These bevel gears are specifically designed for use in agricultural machinery. They feature precision-cut teeth for efficient power transmission and are manufactured from high-strength steel for durability.

Product Overview

High-Precision Agricultural Bevel Gears

These precision-engineered bevel gears are specifically designed for the demanding environments of agricultural and gardening machinery. Manufactured from high-strength alloy steel with specialized heat treatment, they ensure optimal power transmission, durability, and wear resistance. The gears are built to withstand harsh operating conditions, providing reliable performance and an extended service life for critical equipment systems.

Technical Specifications

Material	Alloy steel (e.g., 20CrMnTi)
Heat Treatment	Carburizing, Quenching
Surface Treatment	Shot blast
Accuracy Class	GB grade 6-7
Module Range	0.5M - 6M

Application & Compatibility

Primary Industries

Agriculture • Gardening • Construction Machinery

Available Gear Types

- Cylindrical gears
- Bevel gears
- Worm gears
- Sprockets
- Pinions
