

Bevel Gear Set for Power Transmission

This high-quality bevel gear set is designed for power transmission applications. The gears feature precision-cut teeth for smooth and efficient operation.

Product Overview

High-Performance Bevel Gear Set

This high-quality bevel gear set is engineered for reliable power transmission in demanding mechanical applications. Featuring precision-cut teeth and constructed from hardened steel, these gears are designed to deliver smooth, efficient operation and extended service life. The set includes two gears with a specific gear ratio, ideal for use in differentials, transmissions, and various industrial mechanical systems.

Technical Specifications

Key Features

- Precision-cut teeth
- Hardened steel construction
- Splined bore for secure mounting

Material	Hardened Steel
Mounting	Splined central bore for secure shaft mounting
Compatible Applications	Differentials, Transmissions, Mechanical Systems, Power Transmission
