Product Overview

Professional Abrasive Solution

These bevelled sponge abrasive blocks are engineered for precision sanding and finishing tasks across a variety of substrates including wood, metal, and plastic. Featuring a flexible sponge and EVA core, they conform easily to contours and edges, while the bevelled design allows for superior access to tight corners. Available in multiple abrasive types, these blocks are suitable for both wet and dry sanding applications, making them an essential tool for surface preparation and detail work.

Technical Specifications

Abrasive Types	Aluminium Oxide, Black Silicon Carbide
Base Material	Sponge, EVA

Dimensions & Geometry

Bevel Angles

- 15
- 45
