

Beverage Blending System

The Beverage Blending System is engineered for the precise mixing of beverages. It ensures consistent, high-quality mixing, which is crucial for carbonated drinks and complex formulations.

Product Overview

Professional Beverage Blending Solution

The QHS series drink mixer is engineered to optimize the precise proportioning of water, syrup, and carbon dioxide for high-quality beverage production. Utilizing advanced static mixer technology, the system effectively lightens the water layer and increases carbonation duration to ensure superior mixing and deoxygenation. Built with high-quality components and an automated electrical control system, it offers a seamless operation that is both efficient to maintain and easy to clean.

Technical Specifications

Key Features

- Static mixer technology for enhanced carbonation
- High-quality water pump integration
- Advanced electrical control interface
- Coordinating action design
- Easy to wash and maintain

Applications

Soda Water, Fruit Juice, Cola, Soft Drinks, Hard Drinks

Control System

Complete automatic control system
