

Beverage Bottling 3-in-1 Unit, 5000-16000 BPH

This 3-in-1 unit integrates bottle rinsing, filling, and capping into one machine. It is designed for high-speed beverage production, with a capacity of 5000 to 16000 bottles per hour (BPH).

Overview

High-Efficiency Beverage Bottling Solution

The DCGF Series Balanced Pressure 3-in-1 Unit is a comprehensive, integrated system designed for modern beverage production. By combining bottle rinsing, filling, and capping into a single streamlined machine, it significantly enhances operational efficiency and saves valuable floor space. This unit utilizes advanced balanced pressure filling technology to ensure precise fill levels, consistent quality, and minimal product waste.
