

Bias Tire Forming Machine

This bias tire forming machine is designed for precise and efficient construction. It features adjustable settings for various tire sizes and specifications.

Overview

Advanced Bias Tire Manufacturing

This bias tire building machine is a high-tech solution integrating mechanical, electrical, and pneumatic control systems for professional tire production. It features a robust frame and advanced control systems designed for precise ply placement and accurate tire shaping. The machine's versatile design includes adjustable settings to accommodate various tire sizes, making it an ideal choice for both small-scale and large-scale manufacturing facilities.

Technical Features

Key Capabilities

- Precise ply placement
- Accurate tire shaping
- Adjustable size settings
- High-quality output

Control System

Mechanical, Electrical, Pneumatic Control

Design & Ergonomics

Operational Design

- Ergonomic frame design
- User-friendly interface
- Simplified maintenance access

Application

Facility Suitability

Small-scale • Large-scale

Target Production

Professional Bias Tire Manufacturing
