

Bicycle

Bicycle for recreational or competitive use. This two-wheeled vehicle is human-powered.

Overview

Versatile Transportation Solution

This bicycle is designed for general machinery and equipment applications, offering a reliable mode of transport and recreation. It integrates essential components including precision meters and instruments to monitor performance and usage. Built for durability, it serves as a versatile piece of equipment suitable for various outdoor environments.

Key Features

Key Components

1 unit Integrated Meter	1 unit Precision Instrument
-----------------------------------	---------------------------------------

Technical Details

Included Components

- Bicycle Frame and Parts
- Performance Meter
- Monitoring Instrument
- General Mechanical Assembly

Product Classification

General Machinery, Equipment, Bicycle Parts, Instrumentation

Application

Recommended Safety Gear

Helmets • Cycling Gear

Usage Environment

Outdoor, grassy fields, and wooded areas
