

# Bicycle Component with Textured Surface

This bicycle component features a textured surface and intricate design. It is engineered for attachment or adjustment within a bicycle's assembly.

## Product Overview

### Precision Bicycle Component

This high-precision bicycle component is engineered for specialized functionality within braking or shifting systems. Featuring a unique geometry and a distinct textured surface, it is designed to integrate seamlessly into complex bicycle assemblies. The inclusion of a precision aperture ensures secure attachment and reliable performance for demanding cycling applications.

## Technical Details

### Design Features

- Intricate engineering design
- Specialized aperture for mounting
- Textured surface for grip/interface

Surface Texture	Textured
Markings	LBH
