

Bicycle Frame Reinforcement Brackets

High-strength metal brackets designed for bicycle frame assembly and reinforcement. These accessories feature precision-cut mounting holes and durable construction to ensure secure and reliable attachment.

Product Overview

High-Performance Frame Reinforcement

These bicycle frame reinforcement brackets are engineered for secure frame assembly and structural stability. Designed as specialized fittings for chainless drive shaft systems, they offer a robust connection point for custom bike builds and frame repairs. Crafted from high-grade aluminum, these components ensure long-term durability and reliable performance in demanding cycling applications.

Technical Specifications

Category

Frame Accessories • Reinforcement Bracket

Material Composition

A3 Aluminum, 6061 Aluminum, 7005 Aluminum

Model Identifier

SQ the GR ME

Primary Application

Chainless drive shaft to frame fitting
