

Bicycle Grip Shifters with Brake Levers

These bicycle components integrate grip shifters and brake levers. They allow riders to change gears by twisting the grip and control braking with the levers.

Product Overview

Integrated Control Solution

This dual-function component combines bicycle grip shifting mechanisms with integrated brake levers into a single, cohesive unit. Designed for ergonomic efficiency, it allows riders to manage both gear changes and braking without removing their hands from the handlebars. This streamlined design is ideal for various bicycle models, offering a reliable and intuitive interface for everyday cycling.

Technical Specifications

Compatibility

- Compatible with various bicycle models
- Designed for standard handlebar mounting

Component Type	Grip Shifter with Integrated Brake Lever
Control Features	Twist Shifting, Integrated Braking, Ergonomic Design
