

Bicycle Rear Derailleur

This is a bicycle rear derailleur designed for shifting gears on a bicycle. It mounts to the frame and moves the chain across the cassette sprockets.

Product Overview

High-Performance Rear Derailleur

This bicycle rear derailleur is engineered for precise and smooth gear shifting across various terrains. Featuring a durable black body construction with a distinct red pulley wheel, it ensures reliable chain movement across the cassette sprockets. Designed for standard frame mounting, this component integrates seamlessly with existing cable-actuated shifting systems to provide consistent performance for cycling enthusiasts.
