

Bicycle Rear Derailleur for Gear Shifting

This rear derailleur facilitates gear shifting on bicycles. It is designed for indexed shifting systems and allows for fine-tuning of gear changes.

Product Overview

Precision Gear Shifting Component

This rear derailleur is engineered for reliable and precise gear shifting in indexed bicycle drivetrain systems. Designed to facilitate smooth chain movement across the cassette, it allows cyclists to efficiently manage variable gear ratios. The unit features a durable black finish with a high-visibility red jockey wheel and includes integrated adjustment screws for precise tuning.
