

Bicycle Rear Derailleur with Indexed Shifting

This bicycle rear derailleur is designed for smooth chain transitions across different rear cogs. It is equipped with adjustment screws to allow fine-tuning of gear changes in indexed shifting systems.

Product Overview

Precision Rear Derailleur

This high-performance rear derailleur is engineered for smooth and reliable gear transitions across various cycling conditions. Designed specifically for indexed shifting systems, it ensures precise chain movement between rear cogs for an optimized riding experience. The unit features durable construction with a distinct silver-colored body and black cage for long-lasting operation.
