Product Overview

High-Performance Bicycle Hub

The DM-A201 bicycle hub is engineered for cyclists demanding both durability and smooth performance. Constructed from a lightweight aluminum alloy, this hub minimizes rotational weight while maintaining exceptional structural integrity. Designed with precision bearings, it ensures efficient power transfer and reliable rolling characteristics across various riding conditions.

Technical Specifications

Suitability

- Recreational Cycling
- Professional Cycling
- Custom Wheel Building
- Wheel Upgrades

Model Number

DM-A201

Material

Aluminum Alloy

Key Features

Precision Bearings, Lightweight Design, Robust Axle, Corrosion Resistant
