

Bicycle Wheel Quick Release Skewer

A bicycle quick release skewer secures a bicycle wheel to the frame or fork using a lever and adjustable nut. It consists of a rod that passes through the wheel's hub, with springs ensuring even pressure distribution.

Product Overview

Quick Release Skewer Mechanism

This bicycle quick release skewer is a precision-engineered mechanism designed for secure and rapid wheel attachment to bicycle frames or forks. Featuring a robust rod, an ergonomic lever, and an adjustable nut, it allows for seamless wheel changes without tools. The integrated cam mechanism ensures reliable clamping force, while the inclusion of springs on either side of the hub guarantees even pressure distribution for optimal performance.

Technical Specifications

Included Components

- Rod
- Lever
- Adjustable nut
- Springs (pair)

Material	Metal
Locking System	Cam mechanism
Key Features	Tool-free operation, Even pressure distribution, Adjustable clamping force, Quick release
