

Bimetallic Disc Thermostat

This bimetallic thermostat is designed for temperature control and thermal protection. It is commonly used in appliances, HVAC systems, and other applications requiring precise temperature regulation.

Product Overview

High-Performance Bimetallic Disc Thermostat

This bimetallic disc thermostat is engineered for precise temperature control and thermal protection across a wide range of industrial and domestic applications. Featuring a robust construction with a durable brass or metal housing and a sensitive bimetallic disc mechanism, it ensures reliable switching performance. It is ideal for integration into HVAC systems, electrical appliances, and various thermal regulation circuits requiring consistent operation within a broad temperature range.

Electrical Specifications

Voltage Range	AC 100 - 250V
Rated Current Options	5A, 10A, 16A

Performance

Operating Temperature Range

-15 C Minimum	250 C Maximum
-------------------------	-------------------------

Temperature Tolerance	+/- 5C
-----------------------	--------

Design & Construction

Housing Construction

- Brass body
- Black phenolic base
- Metal housing
- Integrated mounting brackets
