

Binocular Optical Instrument for Magnified Viewing

This binocular optical instrument is designed for detailed observation of small objects. It features adjustable eyepieces, a focusing mechanism, and a stable base.

Product Overview

Precision Magnification

This binocular optical instrument is engineered for detailed observation of small objects, providing clear and magnified views essential for inspection and precision tasks. It features a robust, stable base and a smooth focusing mechanism to ensure consistent performance. Designed for versatility, the adjustable eyepieces allow for comfortable use across various professional applications.

Technical Specifications

Adjustable Features

- Adjustable eyepieces
- Focusing mechanism

Viewing System	Binocular
Build Quality	Stable base, Optical precision
