

Biodegradable Pulp Plant Pots

These biodegradable pulp pots are designed for plant propagation and cultivation. Made from recycled materials, they provide excellent drainage and aeration for healthy root development.

Product Overview

Sustainable Plant Propagation

These biodegradable pulp plant pots are designed for efficient plant propagation and cultivation. Constructed from recycled materials, the pots provide excellent drainage and aeration to promote healthy root development. Once established, the pots can be directly transplanted into the soil, where they naturally decompose and enrich the growing medium.

Product Attributes

Suitable Applications

- Seed starting
- Seedling transplantation
- General cultivation

Material Composition	Recycled Pulp
Environmental Credentials	Biodegradable, Recycled Materials, Compostable

Technical Benefits

Root Development Benefits

- Excellent drainage
- Optimal aeration
- Prevents root-binding

Direct Planting	Yes
