

Biodegradable Pulp Seed Starter Pots

These pulp pots are suitable for seed starting and plant propagation. Made from recycled paper pulp, these pots decompose naturally when planted.

Product Overview

Sustainable Cultivation Solution

These biodegradable pulp seed starter pots are expertly crafted from recycled paper pulp, providing an eco-friendly alternative to traditional plastic containers. Designed for seamless plant propagation, the pots decompose naturally when placed directly into the soil, which helps to minimize root disturbance. They are an ideal choice for professional horticulture, agriculture, and nursery applications, ensuring healthy plant growth and simplified transplanting.

Material and Sustainability

Material Composition	Recycled paper pulp
Key Features	Biodegradable, Eco-friendly, Recycled, Root-safe

Application

Best For

- Seed starting
- Plant propagation
- Horticulture
- Agriculture
