

Biodegradable Pulp Seedling Pots

These pulp pots are ideal for seedlings, cuttings, and transplanting. The eco-friendly pots decompose naturally in the soil.

Product Overview

Sustainable Propagation Solution

These biodegradable pulp seedling pots are engineered for sustainable plant propagation and cultivation. Constructed from high-quality recycled paper pulp, they offer a breathable and moisture-retentive environment that promotes healthy root development. These pots are designed to decompose naturally once transplanted, providing an eco-friendly solution for gardeners and professional growers looking to minimize their environmental impact.

Technical Specifications

Key Features

- 100% Biodegradable
- Breathable material
- Moisture-retentive
- Supports healthy root systems

Material Composition	Recycled Paper Pulp
Ideal Applications	Seedlings, Cuttings, Transplanting, Home Gardening, Commercial Cultivation

Sustainability

Environmental Impact

Eco-Friendly • Natural Decomposition • Recycled Material
