Product Overview

High-Performance Drywall Fastening

These black phosphate drywall screws are engineered for the secure attachment of gypsum board to both wood and metal studs. Featuring a sharp, penetrating point and a bugle head design, they ensure flush seating without tearing the paper surface. The specialized black phosphate coating provides necessary corrosion resistance and reduces friction during installation for a smoother, more efficient workflow.

Technical Specifications

Coating/Finish	Black Phosphate
Available Thread Types	Fine Thread, Coarse Thread
Head Style	Bugle Head

Application

Primary Applications

- Gypsum board to keel connection
- Drywall to wood studs
- Drywall to thin steel plates

Key Benefits

Corrosion Resistant • Easy Penetration • Reduced Cam-out • Flush Seating
