

Blast Furnace Dedusting Water Treatment System

This 2000m³ system removes dust from blast furnace water. It supports environmental compliance and efficient operation in industrial complexes.

System Overview

Industrial Water Treatment Solution

This blast furnace dedusting water treatment system is designed for high-capacity industrial environments, such as steel plants. It effectively removes dust and particulate matter from process water, ensuring environmental compliance and maintaining operational efficiency. The system features a robust design with large-scale circular tanks and intricate piping infrastructure to handle demanding industrial filtration requirements.

Treatment Capacity

2000 m³
Capacity

Primary Application

Blast Furnace • Dedusting • Industrial Water Treatment
