

Blind Rivets for Motorcycle Parts

Blind rivets, also known as pop rivets, are fasteners used to join materials together. They consist of a rivet body and a setting mandrel, ensuring a secure and permanent joint after installation.

Product Overview

High-Performance Blind Rivets

These blind rivets, commonly referred to as pop rivets, are essential fasteners designed for secure and permanent joining of materials in motorcycle parts assembly. The system consists of a hollow rivet body and a setting mandrel, ensuring a reliable mechanical bond once installed. Ideal for various automotive applications, these fasteners provide a clean, professional finish and exceptional structural integrity.

Technical Specifications

Component Parts

- Rivet Body (Hollow tube with pre-formed head)
- Setting Mandrel (Internal pin)

Joint Permanence

Permanent • Secure

Fastener Type

Blind Rivet (Pop Rivet)

Installation Mechanism

Mandrel pull-through expansion
