

Blow Molding Machine

This blow molding machine is designed for efficient production of plastic containers and parts. It features precise control systems and optimized cycle times.

Product Overview

High-Performance Blow Molding Solution

The PTB100D is a high-performance blow moulding machine engineered for the efficient production of high-quality plastic containers and parts. It features robust construction, precise control systems, and optimized cycle times to ensure reliable performance. Designed for versatility, this machine is suitable for manufacturing bottles and various hollow plastic products across a wide range of industrial applications.

Performance

Clamping Force

100 kN

Clamping Force Capacity

Compatibility

Compatible Materials

HDPE, LDPE, PP, PVC

Technical Features

Control & Precision

- User-friendly operator interface
- Adjustable parison control
- Advanced temperature control
- Optimized cooling system

Safety & Standards

Safety Systems

Comprehensive Guarding • Emergency Stop Mechanisms
