

Blue Plastic Component Container with Handle

This transparent blue plastic container features a cylindrical body and a handle. It may be used for holding liquids or other materials within a specific device or system.

Product Overview

Versatile Component Container

This blue plastic component container is engineered for durability and reliability in technical applications. Featuring a functional side handle and a specialized spout, it is designed for efficient handling of liquids or granular materials within a larger device or system. The molded plastic construction ensures consistent performance and structural integrity for industrial or professional use.

Technical Details

Color

Transparent Blue

Material

Molded Plastic
