

Bluetooth Audio Receiver with 3.5mm Jack

This Bluetooth audio receiver wirelessly transmits audio from Bluetooth devices to audio systems or headphones. It has a 3.5mm audio jack for compatibility with various audio equipment.

Product Overview

Compact Wireless Audio Solution

The Bluetooth Audio Receiver is a versatile and compact device designed to bridge the gap between wireless sources and wired audio systems. It enables seamless streaming from smartphones, tablets, and laptops to any device equipped with a 3.5mm audio input. With its portable design and built-in rechargeable battery, it is an ideal solution for upgrading legacy audio equipment or adding wireless capability to headphones and car stereos.
