

Bluetooth Audio Transmitter for 3.5mm Devices

This Bluetooth audio transmitter allows users to wirelessly transmit audio from devices with a 3.5mm audio output to Bluetooth-enabled headphones or speakers. It provides a stable Bluetooth connection for high-quality audio transmission, making it suitable for use with MP3 players and CD players.

Product Overview

Wireless Audio Solution

The BTT005 Bluetooth audio transmitter is designed to wirelessly transmit audio from any device featuring a 3.5mm audio output to Bluetooth-enabled headphones, speakers, or receiving devices. This compact solution effectively eliminates the need for physical cables, ensuring a clutter-free and convenient listening experience. It is an ideal accessory for legacy audio sources such as MP3 players and CD players that lack built-in Bluetooth connectivity.
