

Bluetooth Body Composition Analyzer with Handheld Unit

This smart scale uses 8 electrodes across 6 channels to measure body composition. It wirelessly transmits data to a compatible application.

Product Overview

Advanced Body Composition Analysis

This Bluetooth-enabled body composition analyzer provides a comprehensive approach to health monitoring. Featuring an integrated handheld unit, it utilizes bioelectrical impedance analysis (BIA) to deliver precise measurements for both upper and lower body segments. Designed for modern fitness tracking, it seamlessly syncs data to compatible devices, making it an essential tool for professional health assessments.

Technical Specifications

Design Features

- Handheld unit with cable connection
- Digital display
- White finish
- Integrated sensors

Connectivity	Bluetooth
Measurement Unit	kg
