

Bluetooth Stereo Audio Transmitter

This compact Bluetooth stereo transmitter is designed for various audio applications. It allows wireless audio streaming to Bluetooth headphones, speakers, and other audio receivers via a 3.5mm audio jack.

Product Overview

Wireless Audio Connectivity

The BH1000-1C is a compact Bluetooth stereo transmitter designed to bring wireless audio capabilities to devices lacking built-in Bluetooth. By connecting via a standard 3.5mm audio jack, it enables seamless streaming from traditional audio sources to Bluetooth-enabled headphones or speakers. Its portable design and integrated charging port make it an ideal solution for versatile audio applications.
