

Boat Shaped Sharpening Stone

This boat-shaped sharpening stone is an abrasive tool used for honing edges. Its shape allows for precision when sharpening curved blades and knives.

Product Overview

Precision Sharpening Tool

The boat-shaped oilstone is a specialized abrasive tool designed for honing and sharpening the edges of various cutting instruments. Its unique, contoured boat shape is specifically engineered to handle curved edges and intricate profiles with precision. By utilizing honing oil, this stone ensures smooth operation, prevents surface clogging, and effectively removes metal particles to maintain optimal edge performance.

Technical Specifications

Material Composition

- Novaculite
- Aluminum Oxide
- Silicon Carbide

Product Type

Boat Shaped Oilstone

Primary Applications

Woodworking, Metalworking, Culinary Applications, Tool Maintenance

Usage Guidelines

Lubrication

Yes

Usage Note

Requires honing oil to lubricate the surface, prevent clogging, and facilitate metal particle removal.
