

Bolt and Pipe Threading Machine

This machine is designed for creating threads on bolts and pipes. It features a powerful motor, durable construction, and user-friendly controls.

Overview

Professional Threading Performance

The M45 Bolt and Pipe Threading Machine is engineered for high-quality threading and cutting performance in demanding professional environments. Powered by a robust 1500W induction motor, it offers three distinct speed settings to ensure precision across various materials. The unit features an integrated, self-priming oiling system that maintains constant flow, extending the life of your dies and ensuring consistent results.
