

Bow Saw for Woodworking and Pruning

Bow saws are designed for cutting wood, plastic, or bone. The frame holds a blade under tension and provides leverage for tasks such as pruning and cutting firewood.

Overview

Professional Bow Saw

This bow saw is a versatile tool engineered for efficient cutting of wood, plastic, and bone. Featuring a robust frame that maintains high blade tension, it provides the leverage and stability required for demanding tasks. Whether you are pruning branches, preparing firewood, or performing general woodworking, this saw is designed for reliability and ease of use.

Technical Specifications

Compatible Materials

- Wood
- Plastic
- Bone

Key Design Features

Replaceable Blade • High-Tension Frame • Leverage-Focused Design

Primary Applications

Woodworking, Pruning, Firewood Preparation, General Cutting
