Product Overview

Professional Brake Bleeding and Vacuum Testing System

This manual pneumatic brake fluid extractor and bleeding kit is designed for efficient automotive maintenance. It features a hand-operated vacuum pump equipped with a precision pressure gauge, allowing for accurate monitoring during brake bleeding and vacuum system testing. The comprehensive kit includes a reservoir jar, various adapters, and flexible tubing, all housed in a molded carrying case for organized storage and portability.

Technical Specifications

Included Components

- Hand-operated vacuum pump with pressure gauge
- Brake fluid reservoir jar
- Assorted adapters
- Flexible tubing
- Molded storage case

Key Features

Manual Operation • Pressure Gauge Included • Portable Case • Automotive Grade

Primary Applications

Brake System Bleeding, Vacuum System Testing, EGR Valve Testing, Sensor Testing, Fuel System Diagnostics
