

Brass and Flanged Gate Valves

These gate valves are designed for use with water and oil. They are available in sizes ranging from 1/2 to 4 inches and conform to ISO228 standards.

Product Overview

High-Performance Brass Gate Valves

These professional-grade brass gate valves are designed for reliable flow control in industrial and commercial applications. Engineered to handle water and oil, they offer robust performance with temperature resistance up to 160°C. Available in both standard threaded and flanged configurations, these valves provide versatile installation options for various piping systems.

General Specifications

Working Medium	Water, Oil
Max Working Temperature	160 °C
Thread Standard	ISO228 Parallel Pipe Thread
