

Brass Ball Valve

This ball valve controls the flow of liquid or gas with a rotating ball and bore. A quarter turn of the ball opens or closes the valve.

Product Overview

Professional Grade Brass Ball Valve

This full port brass ball valve is designed to efficiently control the flow of liquids and gases through a rotating ball mechanism. With its robust quarter-turn operation, it provides reliable, leak-free shutoff performance across various industrial and residential plumbing applications. The valve is engineered for durability, ensuring long-term functionality even in systems that remain idle for extended periods.

Technical Specifications

Available Sizes
