

Brass Burner Cap for Gas Cooktops

This burner cap is designed for optimal gas flow and combustion efficiency. Constructed from durable brass, it ensures consistent performance and longevity.

Product Overview

Precision-Engineered Brass Burner Cap

This brass burner cap is precision-engineered to ensure optimal gas flow and superior combustion efficiency for gas cooktops. Constructed from durable, high-quality brass, it is designed to withstand high-temperature environments and resist corrosion, ensuring long-term reliability. Its smooth surface finish facilitates easy cleaning, making it an ideal component for various burner applications requiring consistent flame characteristics.

Technical Specifications

Performance Metrics

1 Optimized

Combustion Efficiency

Design Qualities

- Precision-engineered venturi design
- Robust construction for durability
- Smooth surface finish

Material	Brass
Key Features	High-Temperature Resistant, Corrosion Resistant, Optimal Gas Flow, Easy-Clean Finish
