

Brass Burner Cap for Gas Cooktops

Precision-engineered for optimal gas distribution and efficient combustion. Constructed from durable brass with a radial array of angled slots for uniform flame propagation.

Overview

Precision-Engineered Brass Burner Cap

This high-quality brass burner cap is precision-engineered to ensure optimal gas distribution and efficient combustion for residential and commercial gas cooktops. Featuring a radial array of angled slots, it promotes uniform flame propagation across the burner surface. The integrated perforated dome design ensures reliable pilot light ignition, while the robust brass construction guarantees long-term durability under high-heat conditions.

Physical Properties

Material	Brass
Mounting Holes	2

Design Features

Flame Distribution	Radial array of angled slots
Ignition Support	Yes
Key Features	Uniform Flame Propagation, Pilot Light Ignition, Heat Resistant, Secure Mounting

Application

Compatible Appliances

- Gas Stoves
- Gas Cooktops
