

Brass Electrical Terminal Block

Brass terminal blocks are designed for secure and reliable electrical connections. They feature brass conductors for optimal conductivity and corrosion resistance, ensuring long-lasting performance in various electrical applications.

Product Overview

Professional Electrical Connectivity

These brass terminal blocks are engineered for high-performance electrical panels and power distribution systems. Utilizing high-grade brass conductors and durable nylon 66 housing, they provide superior stability and safety compared to standard market alternatives. Designed for reliability, these blocks ensure secure wire termination in critical control environments.

Technical Specifications

Conductor Material	Brass
Housing Material	Nylon 66
Applications	Electrical Panels, Power Systems, Control Panels, Power Distribution

Key Features

Key Performance Indicators

66 Nylon

Housing Material Grade

Design Advantages

- High conductivity brass conductors
- Corrosion resistant materials
- Durable color-coded plastic housings
- Secure screw terminal connections
