

Brass Foil for Radiator Fins

This brass foil is designed for radiator fin applications. It offers excellent thermal conductivity, corrosion resistance and formability for efficient heat transfer.

Product Overview

High-Performance Brass Foil

This high-quality brass strip is specifically engineered for radiator fin applications, offering exceptional thermal conductivity and corrosion resistance. Its superior formability makes it an ideal choice for efficient heat transfer in demanding electronic cooling systems. With precise thickness and width dimensions, this foil ensures optimal performance and seamless integration into various heat dissipation designs.

Material Properties

Material	Brass
Primary Application	Radiator Fins, Electronic Cooling, Heat Dissipation

Key Features

Key Advantages

1 High Thermal Conductivity	1 High Corrosion Resistance
Formability	Yes
