

Brass Heating System Manifold with Dual Outlets

This brass manifold is designed for heating systems. It features dual outlets with threaded connections and hexagonal fittings for distributing fluids.

Product Overview

Professional Heating Distribution

This brass heating system manifold is engineered for efficient fluid distribution in residential and commercial heating networks. Featuring a robust dual-outlet design, it ensures reliable flow regulation and system performance. The durable brass construction provides excellent corrosion resistance, making it an ideal choice for long-term integration into hydronic heating infrastructures.

Technical Specifications

Primary Applications

- Hydronic Heating Systems
- Fluid Distribution
- Heating Circuit Regulation

Material	Brass
Number of Outlets	2
Key Features	Dual Outlet, Threaded Connections, Hexagonal Fittings, Durable Construction
