

Brass Manual Shutoff Ball Valve

This ball valve is constructed from durable brass and features a compact design suitable for various industrial applications. It includes threaded connections for easy installation and a top-mounted actuator for manual operation.

Product Overview

Professional Grade Shutoff Solution

This brass manual shutoff ball valve is engineered for durability and reliable performance in demanding industrial fluid systems. Its compact design allows for seamless integration into existing pipelines, while the robust brass construction ensures long-term resistance to wear. Designed for precision flow control, this valve features a top-mounted actuator for intuitive manual operation and threaded connections for straightforward installation.
