

# Brass Multi-Port Manifold for Fluid/Gas Distribution

This brass manifold is designed for distributing fluids or gases. It features multiple threaded ports for secure connections in plumbing and industrial applications.

## Product Overview

### High-Performance Brass Manifold

This solid brass manifold is engineered for reliable fluid and gas distribution in diverse plumbing and industrial environments. Its robust construction provides exceptional durability and inherent corrosion resistance, ensuring long-term performance under pressure. Featuring a central body with multiple radially extending threaded ports, it offers a secure and versatile solution for managing complex connection points.

## Technical Specifications

### Key Design Features

- Central body design
- Radially extending ports
- Threaded connection points
- Corrosion-resistant construction

### Durability Characteristics

Corrosion Resistant • High Pressure Compatible

<b>Material</b>	Solid Brass
<b>Suitable Applications</b>	Fluid Distribution, Gas Distribution, Plumbing Systems, Industrial Piping
